

Software to Improve
Healthcare Efficiency

NetAccess

PRODUCT BRIEF

SIMPLE, SECURE ACCESS VIA THE INTERNET

Healthcare workers have extremely busy schedules. Any product that enables them to schedule their time more efficiently helps them stay in control and be able to better care for their patients. The NetSolutions family of web-enabled applications is the quickest and most economical way for healthcare providers to leverage the Internet. Connect your doctors, staff and technical support to the data they need - from MEDITECH or other Healthcare Information Systems – using HIPAA-compliant software.

NETACCESS - AUTHORIZED SYSTEM ACCESS

NetAccess enables authorized remote system users to access their organization's hospital information system securely through the Internet. Physicians, clinicians and other healthcare workers utilize their time more effectively by accessing patient information securely from a remote environment. Review patient records, sign reports, or authorize tests from your home or office without having to drive to the hospital.

NetAccess creates a validated and encrypted connection from a client or clients outside the hospital to a validation server at the hospital. Once validated, the remote session is decrypted and passed from the validation server to a host. Single users or multiple users from a site can be connected via a single client connection, allowing NetAccess to be deployed as a solution for small office and clinic connectivity.

NetAccess is customized for each site to allow you to distribute it (and all required files including emulation software) easily via the web or in a selfinstalling file you can provide to users via diskette or e-mail.

Convenient access from a remote location

"The NetAccess product has enabled us to provide a service to our physicians that allow them to securely monitor their patient's care from anyplace and at any time. Physicians can utilize their time more efficiently while caring for their patients more effectively, thus contributing to the "Continuum of Care model."

Doctors Love the Convenience of Secure Remote Internet Access

"Our doctors – and we have hundreds of them – love NetAccess. It was easy to implement at the hospital and just as easy for the doctors to download the application, self-install, and use over their standard dial-up connection."

"Most important, with 128-bit encrypted communications between the office and the hospital, along with device-specific authentication, we all have the end-to-end security needed to protect patient confidentiality.

*Mike Perry
Network Analyst
Affinity Health Systems
Appleton, WI*

FEATURES AND BENEFITS

The many features of NetAccess provide healthcare workers with a system that meets the demands of this industry.

- Ease support issues by converting from direct dial-up lines to a high-speed Internet link.
- Provide enhanced security through user validation and data encryption.
- Provide bandwidth on demand for users and clinics without costly infrastructure changes.
- Offer simple and secure remote connections for any users from a local phone call.
- Guarantees compliance with HIPAA, HCFA and JCAHO requirements with 128-bit SSL encryption.
- Supports unlimited users simultaneously, controlling costs without limiting service to all users.
- Quick and easy client installation enables users to install without on-site assistance or intervention.
- Is fully integrated with Windows authentication, providing secure access using domain usernames and passwords, easy installation and configuration, and remote update of expired passwords.
- Validates all users to maintain a secure audit trail of all active users.
- Restrict users to specific remote devices, minimizing risk of unauthorized sharing of passwords.
- Eliminates the need for modem banks, reducing costs and eliminating contention or hung lines.

PRODUCT INFORMATION

- Runs as a service under Windows Server 2003/2003 R2, Windows Server 2008/2008 R2, and Windows Server 2012/2012 R2.
- Client supports all Windows operating system clients with Internet Explorer 6.0 or above.
- Uses 128-bit SSL encryption (requires server to have Microsoft IIS installed).
- Logs all activity to Windows Event Viewer and MEDITECH MIS routines.
- Supports TCP/IP protocol. Product can be placed behind the firewall or on a DMZ.
- Allows access to all simple TCP/IP services, including Telnet, HTTP, POP, FTP, etc.
- Supports MEDITECH device-level security.
- Available in 10 user, 25 user, and unlimited user licenses.

NetAccess – Simplifies Access to Patient Information

“Currently, NetAccess is being used by over 130 users, both from their office and from some physician’s homes. NetAccess is a simple, straightforward product that was easy to install and set up. It basically runs itself. Once Interbit Data helped us get it up and running, it has been going ever since. We are extremely happy with the ease of use of this product.”
